

Press Release

6th August 2015

Suez Canal

In parallel with the New Suez Canal inauguration on the 6th of August, SIGNALIS is proud to announce the achievement of a significant Operational Milestone for the Suez Canal Authority Vessel Traffic Management System (VTMS). As part of the Suez Canal Extension our Team has installed several radars and cameras. The data from these multiple sensors feeds into the VTMS enabling Canal Operators to monitor the Safety and Security of vessels transiting the Canal. A further radar will be installed later this year, complemented by additional radars and new day/night cameras in 2016.

In addition, aligning with the Suez Canal Authority move to the VTS control center in Ismailia, Port Said and Port Suez, SIGNALIS has successfully delivered three VTMS system operator training courses at each respective site.
